

DataCORE

Concept Review, Technical Rehearsal & Summit Ready Check

Afternoon: DataCORE

1. **Research Concept Review Game (1:00–1:45)**
2. **Full Technical Rehearsal + Q&A Prep (1:45–2:45)**
3. **Scientific Storytelling — Summit Ready Check (2:45–3:00)**

One last sweep for misconceptions, one final run under Summit conditions, and a check that every box is ticked before the big day.

1:00 – 1:45 · Research

A competitive final scan for misconceptions

Kahoot or **Quizlet Live** — teams compete on key concepts from all 14 sessions:

-  Hypothesis vs. theory · types of variables
-  Correlation vs. causation · p-value meaning
-  Citation format · research design terms
-  AI literacy concepts

 **Instructor watches the scoreboard.** Any concept where class accuracy is low gets a **2-minute clarification on the spot** — these are exactly the gaps adult guests probe in Summit Q&A.

✓ Concept quick-check – get these right

Correlation ≠ Causation

Two things moving together doesn't mean one causes the other.

p-value

Probability of data this extreme *if the null were true* – not "chance the result is real."

Hypothesis vs. Theory

A hypothesis is a testable guess; a theory is a well-supported explanation.

Variable types

Categorical vs. numeric; independent (cause) vs. dependent (effect).

Citation

Every in-text cite appears in References, in one consistent style.

AI literacy

AI assists and can be wrong; you verify, and you disclose its use.

Self-check: what does a correlation *not* prove?

❓ A positive r tells you experience and wage rise together. It does **not** prove experience *causes* higher wages — education, age, or the type of job could drive both.

✓ In Q&A, say what the number **is** (an association) and what it **isn't** (proof of cause).

45:00

1:45 – 2:45 · Full Technical

One final run – in Summit conditions

No more practice mode. This run is the real thing:

Slides up on the **big screen**.

Team **stands** and presents, in speaking order.

Instructor plays an **audience member**.

 Rehearse the **transitions between speakers** – the awkward hand-off is where most teams lose time and momentum.

One hard question per team

The instructor asks the kind of question a sharp guest will ask:

"How do you know it isn't the reverse — that Y causes X?"

"What would change your conclusion?"

"Did you test whether this holds for different subgroups?"

When you can't fully answer: *"That's a great question. Our study didn't address that directly, but based on what we found..."* A professional, honest response beats a made-up answer.

60:00

2:45 – 3:00 · Scientific Storytelling

The Summit Ready checklist

Run it as a class — every item gets a ✓:

- Title slide with **full team names**
- **References** slide present
- **AI attribution** statement included
- **Every chart has a caption**
- All members **know their speaking part**
- Presentation is **under 12 minutes**

 **Any unchecked box = emergency fix**

Anything not ticked gets **5 minutes of focused attention** before 3:00 PM. Better to catch it now than on the Summit stage.

15:00
